

Claims

1. A method comprising treating a human patient susceptible to or exhibiting symptoms of invasive cancer, by administering to the patient a therapeutically effective amount of a composition comprising a compound selected from the group consisting of L-histidine, Quisqualic Acid and D-cycloserine and analogs of any of these, the administering of the therapeutically effective amount of the composition not being otherwise indicated for the patient.
2. A method comprising treating a human patient susceptible to or exhibiting symptoms of metastatic tumors, by administering to the patient a therapeutically effective amount of a composition comprising a compound selected from the group consisting of L-histidine, Quisqualic Acid and D-cycloserine and analogs of any of these, the administering of the therapeutically effective amount of the composition not being otherwise indicated for the patient.
3. A method comprising treating a human patient where angiogenesis inhibition is indicated, by administering to the patient a therapeutically effective amount of a composition comprising a compound selected from the group consisting of L-histidine, Quisqualic Acid and D-cycloserine and analogs of any of these, the administering of the therapeutically effective amount of the composition not being otherwise indicated for the patient.
4. A method comprising treating a human patient wherein treatment with endostatin has been indicated, by administering to the patient a therapeutically effective amount of a composition comprising a compound selected from the group consisting of L-histidine, Quisqualic Acid and D-cycloserine and analogs of any of these.
